**South River Technologies Launches Titan FTP Server 6.0**

*Enhanced Product Delivers Unmatched Levels of Security, Scalability and Interoperability to Growing Customer Base*

**ANNAPOLIS, Md.—June 19, 2007**—South River Technologies, Inc., an innovator in secure file transfer and collaboration software, today announced the availability of its Titan FTP Server 6.0, an enterprise class storage server that allows secure file management and document transfer. Titan FTP Server 6.0 comes with added security functionality, such as native File Encryption that encrypts data in realtime as it is being written to the server disk. In addition, Titan offers Secure Sockets Layer (SSL) certificate and Secure Shell (SSH) Host Key authentication which enables secure client authentication and secure file transfer.

In addition to several security upgrades, Titan continues to be one of the most scaleable file management solutions on the market with an unlimited number of servers in a clustered environment which enables Titan to support virtually an unlimited number of user accounts. This enables users to easily scale the size of their implementations as their needs grow, continuing to provide the required storage and throughput needs to efficiently support the organization. Titan can also interface to existing networks with tens-of-thousands of user accounts.

Titan also supports a wide array of existing user authentication, including Active Directory, industry standard Lightweight Directory Access Protocol (LDAP) servers and custom user databases which allows Titan to query special users/groups to check for passwords and group membership. In addition, Titan's enhanced Event Management features allow it to be an excellent front-end for existing workflow and file management.

“Delivering increased levels of encryption and authentication is part of our broader security strategy in meeting the demands of selling industry leading technologies products to government and global 1,000 corporations,” said Michael Ryan, CEO and co-founder of South River Technologies, Inc. “By enhancing security functionality and scalability we can ensure that our customers can file share and collaborate and without the fear that proprietary information is purposely stolen by unauthorized individuals.”

**About South River Technologies**

South River Technologies is an innovator in secure file management and collaboration software. The company's software allows users to access, manage and share files over the Internet in order to automate and streamline business processes and enhance productivity. SRT's products enhance customers' existing applications by instantly enabling secure access and Internet file sharing within those applications. More than 55,000 customers in over 110 countries use SRT's software to make remote file access and collaboration more efficient for their customers, partners and distributed workforce.
